

MARCH 2020

## Cleaning and Maintenance for GLASSOS® Crystal White

- Dust or wipe away any surface debris with a soft cloth before cleaning
- GLASSOS® may be cleaned with common glass cleaner like Windex®
- Polished GLASSOS® Crystal White never requires sealer.
- Clean and dry with a soft white cloth or white paper towel
- Avoid using abrasive sponges, scouring powders or caustic chemicals
- Avoid dragging heavy, or potentially abrasive objects across the surface
- Install felt adhesive glides on the feet of any appliance or object stored on the horizontal surface. Protect vertical surfaces from doors and heavy objects.
- Clean up spills and dirt right away
- Use a cutting board during food preparation. Protect the horizontal or vertical surface with a towel or soft cloth before placing metal or other potentially abrasive objects against it.
- Remove glue or dried residue from the polished surface using a new straight edge razor blade and glass cleaner.
- Satin Texture finish may be cleaned with warm, soapy water. Lightly work the area using a toothbrush or soft scrub brush. Remove the dirty water from the surface with a clean white cloth or paper towel.
- Satin texture may also be cleaned using Lysol® Mold and mildew remover.
- Edges may be cleaned using glass cleaner and compressed air and refilled by a stone professional as needed.
- In the unlikely event that the surface gets damaged please contact a stone professional or CCS Stone for technical support or consultation.
