Cleaning and Care for GLASSOS® Calacatta and Statuary Veined Slabs

- The veined images that are fused into Glassos® Statuary and Calacatta have a clear glaze that should be treated with care.
- The surface is nonporous and does not require a sealer.
- The surface may be protected with products like Mequiar's® Ultimate Liquid Wax, or Italian Craftsman Marble Polish®
- The use of polish or wax helps protect the surface against acidic spills
- Clean up spills that may contain food acids right away.
- Avoid using abrasive sponges, scouring powders or acidic cleaners like Barkeepers Friend®.
- Dust or wipe away any dirt or surface debris with a soft cloth before cleaning.
- GLASSOS® Calacatta and Statuary may be cleaned with common glass cleaner like Windex® or Invisible Glass®
- Clean and dry with a soft white cloth or white paper towel
- Avoid dragging heavy, or abrasive objects across the surface.
- Install felt adhesive glides on the feet of any appliance or object stored on the horizontal surface. Protect vertical surfaces from doors and heavy objects.
- Use a cutting board during food preparation. Protect the horizontal or vertical surface with a towel or soft cloth before placing metal or other potentially abrasive objects against it.
- Remove glue or dried residue from the polished surface using a new straight edge razor blade and glass cleaner.
- In the unlikely event that the surface gets damaged please contact a stone professional
